2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70B01	Engineering Mathematics (Common for CE, EEE, ME, ECE, CSE, IT and Mi.E)	L	T	P
Credits: 4		3	2	-

Pre-requisite: Basics of Matrices & Basic differentiation and integration.

Course Objectives:

The objective of this course is to familiarize the students with linear algebra and elements of mathematics. Differential equations play a major role in understanding many processes and systems that are of interest to the engineers in a generic sense. An in-depth understanding of the ordinary and higher order differential equation are an absolutely essential part of the tool-kit of a well trained engineer. This course fills into this perceived need. The treatment should be informed by the fact that not only conceptual but also and in some cases, more importantly numerical or computational methods are of essence. This is specially designed for students to help them bring to speed with other students who have already had some training in mathematics at the 12th Standard level.

MODULE – I: Matrices and Linear systems of equations [12 Periods]

Rank of the matrix - Elementary transformations –Echelon form – Normal form – PAQ Form - Inverse of a Matrix by applying Elementary transformations.
Solution of Linear Systems – Consistency of linear system of equations – Gauss elimination method – LU-Decomposition method –Solution of Tri-diagonal Systems (Thomas Algorithm).

MODULE – II: Eigen Values & Eigen Vectors [12 Periods]

Linear transformation - Eigen values - Eigen vectors – properties – Linearly independent and dependent vectors - Cayley-Hamilton Theorem (without Proof) - Inverse and powers of a matrix by Cayley-Hamilton theorem.
Diagonalization of matrix-Calculation of powers of matrix,– Modal and spectral matrices. Real matrices – Symmetric - skew – symmetric -Orthogonal Matrix. Similarity Transformation - Orthogonal Transformation. Quadratic forms

MODULE – III: Differential Equations of first order and first degree [12 Periods]

A: Formation of Differential Equations - Solutions of First order Differential Equations: Homogeneous - Non-homogeneous – Exact - Non-exact.
B: Leibnitz’s Linear Equation - Bernoulli’s Differential Equation. Applications of First Order Differential Equations: Orthogonal trajectories - Newton’s Law of cooling - Law of natural growth and decay.

MODULE – IV: Differential Equations of Second & Higher Order [12 Periods]

Rules for finding Complementary function-Particular integral (Non-homogeneous term of the type e^{ax} , $\sin bx$ / $\cos bx$, x^n , $e^{ax}V(x)$, $x^nV(x)$ only)
Method of variation of parameters. Equations reducible to constant coefficients - Cauchy - Euler and Legendre’s differential equations.

MODULE –V: Laplace Transforms [12 Periods]

Definition of Laplace transform, Condition for existence, Laplace transform of standard functions, Properties of Laplace transform, Laplace transform of function when they are multiplied or divided by ‘t’, Evaluation of Integrals by using Laplace transforms.
InverseLaplace transforms: Finding inverseLaplace transforms using partial fractions, first shifting theorem, Inverse Laplace transforms of derivatives, Convolution theorem, Dirac’s delta function, Unit step function. Application of Laplace transforms to ordinary differential equations.

4. <https://www.youtube.com/watch?v=DPg5T-YBQJU> (Laplace transforms)

Course Outcomes:

After completion of this course, students will be able to:

1. Apply the operations on Matrices like Row, Column operations, Rank of the Matrix and Able to check the Consistency and Inconsistency of the system of equations.
2. Find the Eigen values and Eigen vectors of the given Matrix to analyze the associated Spectral matrix. Application of Cayley –Hamilton theorem.
3. Solve the first order first degree Differential equations and its applications
4. Understand higher order ordinary differential equations and apply them in Bending of Beams and circuit problems.
5. Understand Laplace Transforms and perform its applications to linear differential equations and real time applications.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70B06	Engineering Physics (Common for CE,EEE,ME,ECE,CSE,IT and Mi.E.)	L	T	P
Credits: 4		4	-	-

Prerequisites: NIL

Objective:

The main objective of this course is to provide an adequate exposure and develop insight about the basic principles of physics along with the possible applications

Module-I: Optics

[9 Periods]

Principle of superposition, Coherence–Spatial and Temporal; Introduction to Interference, Young’s double slit experiment - Optical path difference and Fringe width; Interference in thin films (Reflected light) Cosine law; Newton’s rings experiment - Determination of wavelength of light. Concept of diffraction, Diffraction grating – resolving power.

Module–II: Waves and Oscillations

[9 Periods]

Introduction, Differential equation for SHM and its solution; expression for energy of the oscillator; superposition of two linear SHMs (with same frequencies) - Lissajous figures; Damped vibrations - differential equation and its solution, Critical damping, under damping and over damping; Qualitative treatment of Forced vibrations, sharpness of resonance, analogy between mechanical and electrical oscillators.

Module–III: A. Crystal Structures

[7 Periods]

Space lattice, crystallographic axes, Unit cell, Lattice parameters; Crystal systems, Bravais lattices, Miller indices, Crystal planes and directions, Inter-planar spacing of orthogonal crystal systems, Atomic radius, Coordination number and atomic packing fraction of SC, BCC and FCC lattices, Diamond, ZnS and NaCl structures.

B. X-ray Diffraction

[4 Periods]

Introduction, Bragg’s law, Laue and Powder methods, Application of XRD to analyze Cubic structure.

Module–IV: Principles of Quantum Mechanics

[8 Periods]

Postulates of Quantum mechanics, Louis de Broglie's concept of matter waves, Davisson and Germer’s experiment, Heisenberg’s Uncertainty Principle, Schrödinger’s Time dependent and Independent Wave Equation; Physical Significance and properties of the Wave Function; Energy of a particle in One Dimensional infinite Potential well.

Module–V: Nano materials

[8 Periods]

Introduction - Nano scale, Surface to volume ratio and Quantum confinement; Optical properties, Electrical properties; brief description of different methods of synthesis of nano materials - physical (LASER ablation, Ball milling), chemical (Vapor deposition, Sol - gel); Carbon nano-tubes - properties and applications, Applications of nano materials - automobiles, electronics, medical, cosmetics, textile.

Outcomes:

After completion of the course, student will be able to:

1. be aware of the concepts of Interference, diffraction and its applications.
2. distinguish free, damped and forced vibrations, develop basic knowledge on the distribution functions and simple applications
3. apply the basic principles of crystals and analysis of crystal structures using X-ray diffraction.

4. acquire the theoretical information about matter in terms of quantum physics
5. analyze and apply various synthesis methods of nano materials and different applications.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70B10	Applied Chemistry (Common for CE,EEE,ME,ECE,CSE,IT and Mi.E)	L	T	P
Credits: 4		4	-	-

Pre-requisite: Nil

Course Objective:

The purpose of this course is to emphasize the relevance of fundamentals and applications of chemical sciences in the field of engineering and to provide basic knowledge on electrochemistry, batteries, corrosion, applications of conducting polymers in various fields, fuels in day to day life and the concepts of composites, Nano materials and green chemistry.

Module I: Water

[10 Periods]

Hardness of Water: causes of hardness, expression of hardness – units – types of hardness, Alkalinity of water specifications for drinking water (BIS and WHO standards); Estimation of temporary & permanent hardness of water by EDTA method - numerical problems. Boiler troubles – Scale & sludge, Priming and foaming, caustic embrittlement and boiler corrosion; Treatment of boiler feed water – Internal treatment (Phosphate, carbonate and calgon conditioning). External treatment – Lime Soda process and ion exchange process, Numerical Problems. Disinfection of water by chlorination and ozonisation. Desalination by Reverse osmosis.

Module II: Electrochemistry and Corrosion

A: Electrochemistry

[6 Periods]

Introduction-Conductance-Specific and Equivalent conductance. Electrochemical cells- EMF, Galvanic Cells, Electrode potential, Calomel Electrode, glass electrode; Nernst equation its applications and numerical problems - Batteries: Primary cells (dry cells) and secondary cells (lead-Acid cell, Ni-Cd cell). Applications of batteries. Fuel cells – Hydrogen – Oxygen fuel cell and its Applications.

B: Corrosion:

[6 Periods]

Causes and effects of corrosion: Theories of corrosion – Chemical & Electrochemical corrosion; Factors affecting rate of corrosion – Nature of metal and Nature of Environment – Corrosion control methods – Cathodic protection (Sacrificial anodic). Surface coatings: Metallic coatings & methods of application of metallic coatings - hot dipping (Galvanization), Cementation, Electroplating (Copper plating), Electroless plating of Nickel.

Module III: Polymers

[6+6 Periods]

(A) Types of Polymerization-Chain (Free radical Mechanism)&Step growth. Plastics: Thermoplastic & Thermosetting plastics, Compounding& fabrication of plastics (Compression and injection moulding). Preparation, properties, engineering applications of PVC, Teflon, Nylon – 6,6 and Bakelite.

(B) Conducting polymers: Polyacetylene, Polyaniline, Mechanism of Conduction, doping; applications of Conducting polymers. Bio degradable polymers: poly lactic acid and poly vinyl acetate. Elastomers: Natural Rubber-vulcanization. Synthetic Rubber- preparatrn, properties and applications of BuNa-S, Butyl rubber. Fibre-reinforced polymers-properties and applications.

Module IV: Fuels and Combustion

A: Fuels:

[6 Periods]

Classification – solid fuels: coal – analysis of coal - proximate and ultimate analysis and their significance. Liquid fuels – petroleum and its refining. Cracking- fixed bed catalytic cracking, synthesis of petrol by Fisher- Tropsch method. Knocking – octane and cetane rating. Gaseous fuels - constituents, characteristics and applications of natural gas, LPG and CNG.

B: Combustion:

[6 Periods]

Combustion-Definition, Calorific value of fuel – HCV, LCV; Determination of calorific value by Junkers gas calorimeter – Numerical problems on combustion. Renewable energy sources-solar, wind, hydro power and biomass energy advantages, disadvantages and Applications

Module V: Composites, Nano Chemistry and Green Chemistry

A: Composites:

[4 Periods]

Basics of composites, composition and characteristics-types of composites –particle and fiber reinforced composites and their applications. Concept of Bio-fuels (Biodiesel, Bioethanol and Biogas), Biosensors, Biosurfactants.

B: Nano Chemistry:

[3 Periods]

Introduction and classification of Nanomaterials (Fullerence, Carbon nano tubes and nanowires only) - Application of nanomaterials. Brief introduction to nanocomposites

C: Green Chemistry:

[4 Periods]

Introduction, principles of green chemistry, introduction to ultrasonic and microwave assisted reactions, solvent free reactions. Concept of R4M4 (Reduce, Reuse, Recycle, Redesign; Multipurpose, Multidimensional, Multitasking and Multi-tracking) model with special reference of Econoburette, Survismeter.

2. <http://nptel.ac.in/course.php> (Material chemistry video & web courses)

COURSE OUTCOMES

After completion of the course, students will be able to:

1. Acquire knowledge on Water treatment, specifically hardness of water.
2. Acquire knowledge on Electrochemical cell, fuel cells, batteries and its applications.
3. Know the properties and uses of polymeric materials.
4. Analyze the combustion mechanism of various types of fuels (solid, liquid, gas)
5. Acquire basic knowledge on the concepts of Composites, Nano and Green Chemistry.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70501	Computer Programming (Common for CE, EEE, ME, ECE, CSE, IT and Mi.E)	L	T	P
Credits: 3		2	2	-

Prerequisites: NIL

Course Objectives:

This course provides the fundamental concepts of computers and introduce to the students to the field of programming using C language, apply the control structures, iterations statements, arrays, functions, strings, pointers, structures, unions and files. This course also explains the concepts of searching and sorting techniques in C language.

Module I: Fundamentals and Introduction to C Language

A: Fundamentals [04 Periods]

Hardware, Software, Programming languages, Number Systems, Translators, Introduction to Operating System, Program Development steps - Algorithm, Flow charts.

B: Introduction to C Language [07 Periods]

History, Simple C Program, Identifiers, Preprocessor Directives- Include and define, Basic data types, User-defined data types, Variables, Constants, Type qualifiers, Managing Input / Output, Operators, Precedence and Associativity, Expression Evaluation, Type conversions, Simple C Programming examples.

Module II: Control Statements & Arrays

A: Control Statements [04 Periods]

Conditional statements- if and switch statements, ternary operator ?: , Loop Control Statements – while, for, do-while, break, continue and goto statements.

B: Arrays [05 Periods]

Basic concepts, One-dimensional arrays, Two–dimensional arrays, Multi-dimensional arrays.

Module III: Strings & Pointers

A: Strings [04 Periods]

Basic concepts, String Input / Output functions, Arrays of strings, String handling functions.

B: Pointers [05 Periods]

Basic concepts, Pointer arithmetic, Pointers and strings, Pointers and arrays, Dynamic Memory Allocation.

Module IV: Functions & Derived types

A: Functions [05 Periods]

Basics, User defined functions, Inter function communication, Library functions, Storage Classes- auto, register, static, extern, Scope rules, Array and string manipulations using functions, Recursive functions, Pointers and functions.

B: Derived types [04 Periods]

Structures – Basic concepts, Nested structures, Arrays of structures, Structure manipulations using functions, Pointers to structures, Self-referential structures, Unions, bit fields

Module V: File I/O, Sorting and Searching

A: File I/O [04 Periods]

Basic concepts, Text files and Binary files, File input / output operations, File status functions (error handling), Command-Line Arguments, C programming examples.

B: Sorting and Searching [06 Periods]

Sorting - selection sort, bubble sort, insertion sort, Searching - linear and binary searching methods.

Course Outcomes:

On the successful completion of the course, a student will be able to:

1. **Understand** the basic terminology, write, compile and debug programs in computer programming.
2. **Apply** different types of control structures and arrays in a computer programming.
3. **Develop** programs that make use of concepts such as strings and pointers in C language.
4. **Compare** parameter passing techniques, structures and unions in computer programming.
5. **Analyze** file operations, searching and sorting methods.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70201	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING (Common for CE,EEE,ME,ECE,CSE,IT and Mi.E)	L	T	P
Credits: 3		3	-	-

Prerequisites: Nil

Course Objectives: To introduce the concept of electrical circuits and its components. To introduce the characteristics of various electronic devices. To impart the knowledge of various configurations, characteristics and applications of electrical & electronic components.

MODULE I INTRODUCTION TO ELECTRICAL CIRCUITS [10 Periods]

Circuit Concept – R-L-C parameters – Voltage and Current sources – Independent and dependent sources - Source transformation – Voltage and Current relationship for passive elements – Series, parallel, series-parallel, star-to-delta and delta-to-star transformation. Kirchhoff’s laws – KCL and KVL, Loop and Nodal analysis of Networks with independent voltage and current sources.

MODULE II MAGNETIC CIRCUITS [9 Periods]

Magnetic Circuits – Faraday’s laws of electromagnetic induction – concept of self and mutual inductance – dot convention – coefficient of coupling – composite magnetic circuit - Analysis of series and parallel magnetic circuits. Hysteresis and Eddy currents.

MODULE III SINGLE PHASE A.C CIRCUITS [10 Periods]

A: R.M.S and Average values and form factor for sinusoidal wave forms, Steady state analysis of pure R, L and C with sinusoidal excitation.

B: Steady state analysis of series RL, RC, RLC - Concept of Reactance, Impedance, Susceptance and Admittance – Phase and Phase difference – Power factor, Real and Reactive powers.

MODULE IV SEMICONDUCTOR DIODE CHARACTERISTICS [10 Periods]

Qualitative theory of the p-n Junction, the p-n junction as a diode, band structure of an open circuited p-n junction, the current components in a p-n diode, quantitative theory of the p-n diode currents, the volt ampere characteristics, the temperature dependence of V-I characteristics, diode resistance, ideal versus practical diodes, diode equivalent circuits, space charge or transition capacitance CT, diffusion capacitance, breakdown mechanism in diode, Zener diode, V-I characteristics of Zener diode.

MODULE V DIODE APPLICATIONS & SPECIAL SEMICONDUCTOR DEVICES [9 Periods]

DIODE APPLICATIONS: Introduction, load line analysis, series diode configurations, parallel and series-parallel configuration, half-wave rectification, full-wave rectification, general filter considerations, Inductive, Capacitive, LC and CLC filters, Zener diode as voltage regulator.

SPECIAL SEMICONDUCTOR DEVICES: Principle of operation, Characteristics and applications of Tunnel diode, Varactor diode, Photo Diode, LED, LCD.

COURSE OUTCOMES

At the end of the course, students should be able to

- CO1:** Apply basic laws in electrical circuit.
- CO2:** Apply the faraday’s laws of electromagnetism to real world.
- CO3:** Analyze the response of AC network.
- CO4:** Know the practical importance of Diode and its characteristics.
- CO5:** Recognize the operation of Diode and its applications.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70B11	Applied Chemistry Lab (Common for CE, ME and Mi.E)	L	T	P
Credits: 2		-	-	4

Course objectives:

To provide the students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.

List of Experiments: (Any ten experiments)

1. Calibration of Volumetric apparatus.
2. Estimation of Hardness of water by EDTA Method.
3. Estimation of pH of an acid (Three methods).
4. Estimation of alkalinity of water.
5. Estimation of strength of an acid by Conductometry.
6. Estimation of strength of an acid by Potentiometry.
7. Determination of ferrous ion in cement by colorimeter.
8. Determination of viscosity of given liquids.
9. Preparation of Nylon 6,6.
10. Preparation of Thiokol Rubber.
11. Determination of surface tension of given sample using stalagnometer.
12. To Study the inversion of cane sugar by polarimeter.
13. Estimation of Mn^{+2} ion in $KMnO_4$ by Colorimeter.

Course outcomes:

At the end of the course

1. Students are able to estimate the impurities present in water samples.
2. Ability to select lubricants for various purposes.
3. Ability to prepare advanced polymer materials.
4. Ability to know the strength of an acid present in batteries.
5. Ability to find the Fe^{+2} present in unknown substances/ores using titrimetric and instrumental methods.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70502	Computer Programming Lab (Common for CE, EEE, ME, ECE, CSE, IT and Mi.E)	L	T	P
Credits: 2		-	-	4

Software Requirements: Turbo C

List of Programs:

1. a) Practice various Internal and External DOS Commands.
b) Implement various programs logics using algorithms and flowcharts.
c) Write sample examples of C programs to implement basic operations.
2. a) Write a C program to find smallest and largest of given three numbers.
b) Write a C program to find the roots of a quadratic equation.
3. a) Write a C program to find the sum of individual digits of a positive integer.
b) A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.
4. a) Write a C program to find whether the given number is palindrome, perfect, Armstrong or strong.
b) Write a C program to generate all the prime numbers between n1 and n2, where n1 and n2 are values supplied by the user.
5. Write C programs that use both recursive and non-recursive functions
a) To find the factorial of a given integer.
b) To find the GCD (greatest common divisor) of two given integers.
- 6.a) Write a C program to find both the largest and smallest number in a list of integers.
b) Write a C program that uses functions to perform the following:
 - i) Addition of Two Matrices
 - ii) Multiplication of Two Matrices
7. a) Write a C program that uses functions to perform the following operations:
 - i) To insert a sub-string into given main string from a given position.
 - ii) To delete n characters from a given position in a given string.
b) Write a C program to determine if the given string is a palindrome or not
c) Write a C program to find substring in a given string.
d) Write a C program to count the lines, words and characters in a given text.
8. a) Write a C program to implement functions arguments with different returns values.
b) Write a C program to implement call by value and call by reference using functions.
9. a) Write a C program to find grades of a student's using structures and unions.
b) Write a C program to implement nested structures.
10. a) Write a C program which copies one file to another.
b) Write a C program to command line arguments.
11. a) Write a C program that uses non-recursive function to search for a Key value in a given list of integers using Linear search.
b) Write a C program that uses recursive and non -function to search for a Key value in a given sorted list of integers using Binary search.
12. a) Write a C program that implements the Selection sort method to sort a given array of integers in ascending order.
b) Write a C program that implements the Bubble sort method to sort a given list of names in ascending order.

Text Books:

1. Pradip Dey, Manas Ghosh, “**Programming in C**”, Oxford University Press, 2nd Edition, 2011.
2. E. Balagurusamy, “**Computer Programming in C**”, Tata McGraw Hill, 1st Edition, 2013.

References:

1. Brian W. Kernighan, Dennis M. Ritchie, “**The C Programming Language**”, PHI, 2nd Edition, 1990.
2. Greg Perry and Dean Miller, “**C Programming Absolute beginner's guide**”, QUE Publishers, 3rd Edition, 2013.
3. Paul Deitel and Harvey Deitel, “**C How to Program**”, PHI, 7th Edition, 2012.
4. Behrouz A. Forouzan, E.V. Prasad, Richard F. Gilberg, “**C programming: A Problem- Solving Approach**”, Cengage Learning Press, 1st Edition, 2011.

Course Outcomes:

On the successful completion of the course, a student will be able to:

1. **Analyze** concepts in problem solving do programming in C language and write diversified solutions using C language.
2. **Identify** situations where computational methods and computers would be useful.
3. **Understand** the programming tasks using techniques learned and write pseudo-code.
4. **Compare** the program on a computer, edit, compile, debug, correct, recompile and run it.
5. **Identify** tasks in which the numerical techniques learned are applicable and apply them to write programs, and hence use computers effectively to solve the task

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. I Semester		
Code: 70303	ENGINEERING WORKSHOP (Common for CE, EEE, ME, ECE, CSE, IT and Mi.E)	L	T	P
Credits: 2		-	-	4

Objectives:

To understand the usage of hand tools, acquire the skills in model / pattern making and familiarize with various work materials and tools.

I. Trades for Exercises:

At least two exercises from each trade:

1. Carpentry
2. Fitting
3. Tin-Smithy
4. House-wiring
5. Foundry
6. Arc welding
7. IT workshop – Hardware identification and connectivity, assembling, disassembling and OS Installation

II. Trades for Demonstration& Exposure

1. Machine shop
2. Plumbing
3. Wood working lathe
4. Identification of Electronic Components
5. Blacksmithy

Course Outcomes:

After completion of the course, students should be able to:

1. Knowledge of carpentry process and methods used in the design and fabrication, installation, maintenance and repair of structures and fixtures (e.g., furniture, cabinets) to accomplish work assignments.
2. Assembling together of part and removing metals to secure the necessary joint by using fitting and welding.
3. Understand the hardware components of house wiring.
4. Understand the manufacturing process using machine shop.
5. Analyze the different types of computer hardware and software installation.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70H01	English	L	T	P
Credits: 3	(Common for CE,EEE,ME,ECE,CSE,IT and Mi.E)	3	-	-

Course Objective:

The objective of this course is to improve the English Language competency of the students, which emphasizes on all language components namely grammar, vocabulary, prose, short stories. Further, it also helps in developing the skills of Reading and Writing. As a result students are equipped to study the academic subjects more effectively using the theoretical and practical components of the English syllabus.

MODULE – I: Chapter entitled **Minimalism- Live a Meaningful Life** from **Effective English**, Maruthi Publications.

Poem : **Road Not Taken** by **Robert Frost**

Vocabulary : Formation of words, prefixes, suffixes and root words

Grammar : Articles and Prepositions

Reading : Skimming and Scanning

Writing : Introduction to writing skills, characteristics of effective writing

MODULE - II: Chapter entitled **Knowledge Society** from **Effective English**, Maruthi Publications.

Poem : **Life** by Sarojini Naidu

Vocabulary : Homonyms, homophones, homographs

Grammar : Sentence Structures, Voice – exercises

Reading : Intensive Reading and Extensive Reading

Writing : Paragraph writing- use of cohesive devices; arranging jumbled sentences into Paragraph

Module - III: Chapter entitled **Half a Rupee Worth** from **Effective English**, Maruthi Publications.

Poem : **If** by **Rudyard Kipling**

Grammar : Tense, aspect and concord

Vocabulary : Idiomatic Expressions; Phrasal Verbs

Reading : Reading for theme and gist.

Writing : Essay Writing

MODULE - IV: Chapters entitled **Jesse Owens** from **Effective English**, Maruthi Publications.

Poem : **I too Sing America** by **Langston Hughes**

Grammar : Question Tags; Degrees of Comparison

Vocabulary : One word substitutions; synonyms and antonyms

Reading : Reading for interpretation

Writing : Letter writing- both formal and informal

Module - V: Chapter entitled **Pecuniary Independence** from **Effective English**, Maruthi Publications.

Poem : **Human Family** by **Maya Angelou**

Grammar : Direct and Indirect Speech

Vocabulary : Gender sensitive language, integrated exercises in vocabulary

Reading : Reading for specific purposes

Writing : Summarizing

* Exercises from the texts not prescribed shall also be used for classroom tasks.

Course Outcomes:

After completion of the course, students will be able to:

1. Use English considerably well in written and spoken.
2. Enrich language accurately and fluently.
3. Employ extensive and intensive reading skills
4. Gain confidence in using English language and skills for writing in real life situations.
5. Use standard grammar, punctuation, and spelling in documents.

Text Books:

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70B02	Computational Mathematics (Common for CE,EEE,ME,ECE,CSE,IT and Mi.E)	L	T	P
Credits: 4		3	2	-

Pre- requisite: Basics of solving second and higher degree equations.

Course Objectives

The objective of this course is to introduce various numerical techniques which are indispensable tools to solve many algebraic and transcendental equations. Various methods are used to reduce the global error involved in approximations. This course fills into this perceived need. The treatment should be informed by the fact that not only conceptual but also (and in some cases) more importantly numerical or computational methods are of essence.

MODULE – I: Algebraic and Transcendental Equations [12 periods]

Solution of Algebraic and Transcendental Equations: Introduction - Bisection Method - Method of False Position - Iteration Method – Newton-Raphson Method - Ramanujan’s Method.

Gauss Jacobi – Gauss Seidel Methods

MODULE – II: Interpolation [12 periods]

Introduction, Errors in Polynomial Interpolation, Finite differences, Forward Differences-Backward differences, Symbolic relations and separation of symbols, Differences of a polynomial-Newton’s formulae for interpolation

Central difference interpolation Formulae, Gauss Central Difference Formulae, Interpolation with unevenly spaced points: Lagrange’s Interpolation formula.

MODULE – III: Curve fitting, Numerical Differentiation & Integration [12 periods]

A: Curve fitting: Fitting a first degree (linear) and second degree (parabola), exponential, power curves for a data by the Method of least squares.

B: Numerical Differentiation: Evaluation of derivatives, Evaluation of maximum & minimum for a given data. Numerical Integration: Trapezoidal Rule, Simpson’s $1/3^{\text{rd}}$, $3/8$ Rule.

MODULE – IV: Numerical solution of Ordinary Differential Equations [12 periods]

Solution by Taylor’s series method - Picard’s Method of successive Approximations - Euler’s Method-Modified Euler’s Method – Runge-Kutta Methods. Predictor-Corrector Methods: Milne’s method - Adams- Bashforth Method.

MODULE – V: Numerical Solution of Partial Differential Equations [12 periods]

Classification of second order equations – Finite difference approximations to derivatives - standard 5 point formula – diagonal 5 point formula – solution of Laplace equation.

Solution of poisson’s equation.Solution of one dimensional heat, wave equations (by Crank-Nicolson explicit/implicit formula only).

Course Outcomes:

After completion of this course, students will be able to:

1. Apply numerical methods to solve some algebraic and transcendental equations to the desired level of accuracy.
2. Application of interpolation concept to evaluate missed data in data analysis.
3. Application of least squares method to solve data analysis problems and able to find the differentiation and integration by using numerical techniques.
4. Apply differential equations in engineering oriented problems and to observe patterns by using numerical techniques.
5. To find out the Numerical solution of partial differential equations.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70B09	PHYSICS OF MATERIALS (Common for CE, ME and Mi.E)	L	T	P
Credits: 3		3	-	-

Prerequisites: NIL

Objective:

The main objective of this course is to provide the basic physics principles, would help engineers to understand the tools and techniques used in the industry and provide the necessary foundations for inculcating innovative approaches. This would create awareness about the vital role played by science and engineering in the development of new technologies.

Module –I: Magnetic Properties of materials & Superconductivity

A: Magnetic Properties of Materials

[6 Periods]

Introduction, origin of magnetic moment - Bohr magneton; classification of dia, para and ferro magnetic materials, hysteresis curve, soft and hard ferromagnetic materials, properties of anti-ferro and ferri magnetic materials.

B: Superconductivity

[4 Periods]

Concept of Perfect Diamagnetism; Meissner effect ; Type I and II Superconductors; BCS theory (qualitative); High T_C superconductors; Applications of Superconductors - Smart magnets, SQUIDS, transmission lines, Mag-Lev Train.

Module–II: Dielectric Properties of Materials

[8 Periods]

Electric dipole, Dipole moment, Dielectric constant, Polarizability, Electric Susceptibility, Displacement Vector, Electronic, Ionic and Orientation Polarizations and Calculation of Polarizabilities - Electronic and ionic; Qualitative treatment of Internal Fields in solids, Clausius - Mossotti Equation, Piezo-electricity, Ferro- electricity, Barium titanate, Applications of Ferroelectric materials.

Module–III: LASER & Fiber Optic Materials

A: LASER

[8 Periods]

Characteristics of LASER; Absorption, Spontaneous and Stimulated transitions; Einstein's Coefficients and Relations between them; Population Inversion; Pumping - Optical and Electrical; Meta-stable State; Three and Four level pumping schemes; Ruby LASER; Helium-Neon LASER; Nd:YAG LASER; Semiconductor Diode LASER; Applications of LASER - drilling, welding, data storage, optical signal processing and nuclear fusion.

B: Fiber Optic Materials

[6 Periods]

Principle of Optical Fiber; Acceptance angle and Acceptance cone, Numerical Aperture; Step and Graded index Optical Fibers and their Refractive Index profiles; Attenuation in Optical Fibers, Fiber materials, Application of Optical Fibers - Medical, Level sensor and Communication system.

Module –IV: Acoustics & Ultrasonics

A: Acoustics

[4 Periods]

Reverberation & Reverberation time, basic requirements of acoustically good hall; absorption Coefficient, Determination of absorption coefficient based on the standard times of reverberation, Sabine's formula (Qualitative treatment); Factors affecting the architectural acoustics and their remedies.

B: Ultrasonics

[8 Periods]

Introduction, Concept of Magnetostriction, Piezo and inverse Piezo electric effects; Production of Ultrasonic waves - Magnetostriction method; Piezo electric crystal method; Properties of Ultrasonic

waves; Detection of Ultrasonics - Piezo electric detector, Kundt's tube, Sensitive flame method, Thermal detector; Applications - Communication, Industrial, Biological and Medical;

Module –V: Non Destructive Testing (NDT)

[9 Periods]

Introduction, Types of Defects, Methods of NDT, visual Inspection, Liquid/dye penetrate testing, magnetic particle testing, Eddy current testing, Ultrasonic inspection method, Advantages, X-ray radiography, X-ray fluoroscopy, comparison of conventional and real time radiography

Outcomes:

After completion of the course, student will be able to:

1. distinguish ferro, ferri and anti-ferro magnetic materials and understands different types of superconductors.
2. recognizes the dielectric properties of matter.
3. aware of the concepts and applications of LASER and Optical fibers.
4. analyzes the minimum requirements of Acoustics and also various production and detection methods of Ultrasonics.
5. relevant the applications of NDT.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II - Semester		
Code: 70301	ENGINEERING GRAPHICS (Common to CE,EEE,ECE,CSE,ME, IT and Mi.E)	L	T	P
Credits: 4		4	-	-

Prerequisites: Nil

Course Objectives:

The students will be able to understand the manual drawings and getting fundamental knowledge on drafting software.

MODULE I Introduction to Engineering Drawing [15 Periods]

Principles of Engineering Graphics and their Significance. Lettering and dimensioning.

Geometrical Constructions: Regular polygons only.

Curves: Conic Sections including the Rectangular Hyperbola – General method only. Cycloid, Epicycloid, Hypocycloid and Involute.

Scales: Construction of different types of scales - Plain, Diagonal and Vernier scale.

MODULE II Projection of Points, Lines and Planes [15 Periods]

Principles of Orthographic Projections – Conventions – First Angle projections.

Points & Lines: Projection of Points, Projection of Lines- inclined to both the planes.

Planes: Projection of Planes – inclined to one plane only.

MODULE III Projection of Solids & Section of Solids [15 Periods]

Projection of Solids: Projections of regular solids like cube, prism, pyramid, tetrahedron, cylinder and cone by rotating object method. Axis inclined to both the reference planes.

Section of Solids: Sectioning of above solids in simple vertical position with the cutting plane is inclined to the one plane and perpendicular to the other –true shape of section.

MODULE IV Development of Surfaces & Isometric Projections [15 Periods]

Development of Surfaces: Development of lateral surfaces of simple and sectioned solids – prisms, pyramids cylinders and cones.

Isometric Projections: Principles of Isometric Projection – Isometric Scale – Isometric Views– Conventions –Plane Figures, Simple and Compound Solids.

MODULE V Transformation of Projections & Introduction Auto CAD [15 Periods]

Transformation of Projections: Conversion of Isometric Views to Orthographic Views. Conversion of orthographic views to isometric views – simple objects.

Introduction to Auto CAD: Introduction, Salient features of AutoCAD software, Basic commands, construction, editing and dimensioning, two dimensional drawings.

6. <http://nptel.ac.in/courses/112103019/>

COURSE OUTCOMES

At the end of the course, students should be able to

- 1: Understand the basics of drawings and importance of curves.
- 2: Draw the projection of points, lines and planes.
- 3: Draw the projection of solids and section of solids
- 4: Produce development of surface and isometric projections.
- 5: Convert orthographic views to isometric views and vice-versa and know the basics of Auto CAD.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70302	ENGINEERING MECHANICS (Common for CE, ME and Mi.E)	L	T	P
Credits: 4		4	-	-

Prerequisites: Engineering Physics

Course Objectives:

The objective of this subject is to provide the basic concepts and effect of system forces on rigid bodies, Geometrical Properties of Planes and Solids, problem solving in kinematics and kinetics using different methods and to analyse the types of friction for moving bodies and problems related to friction.

MODULE I Introduction to Mechanics & System of Forces [15 Periods]

Introduction: Basic Concepts, Laws of Motion, Force - types, characteristics - Principle of transmissibility - Types of Forces - Concurrent and non-concurrent Forces - Composition of force – Resultant - Triangle, Polygon and Parallelogram Law of Forces - Moment of Force and its Application - Varignon’s theorem, Couples - Free Body Diagrams, Types of Supports and their reactions, Internal and External Forces - Types of Equilibrium, Equations of Equilibrium, Conditions of Equilibrium - Lami’s Theorem.

MODULE II Friction, Centroid and Center of Gravity [15 Periods]

Friction: Types of friction, Limiting friction, Laws of friction, static and dynamic frictions, application of laws of friction. Motion of bodies - wedge, screw, screw jack.

Centroid and Center of Gravity: Introduction, Centroids of Lines and Areas - simple figures - Centroid of composite figures. Pappus theorem - Centre of gravity of simple solids, composite solids - Centroids of volumes.

MODULE III Projection of Solids & Section of Solids [15 Periods]

Area Moment of Inertia: Definition - Moment of Inertia of plane areas, Polar Moment of Inertia, Transfer Theorem, Moments of Inertia of Composite Figures.

Mass Moment of Inertia: Introduction-moment of inertia of masses - Radius of gyration- Transfer formula for mass moment of inertia- by integration - Moment of Inertia of composite bodies.

MODULE IV Kinematics & Kinetics [15 Periods]

Kinematics: Rectilinear motion - Motion of Rigid Body under uniform and variable accelerations - motion under gravity- curvilinear motion – Projectiles - rotary motion.

Kinetics: Analysis as a Particle and Analysis as a Rigid Body in Translation - D’Alemberts Principle - Connected bodies- Kinetics of rotating bodies.

MODULE V Work, Power, Energy & Mechanical Vibrations [15 Periods]

Work, Power and Energy: Introduction, work-energy equation - motion of connected bodies - work done by a spring - general plane motion.

Mechanical Vibrations: Definitions, concepts - simple harmonic motion - free vibrations - Simple and compound pendulums.

COURSE OUTCOMES

At the end of the course, students should be able to

- 1: Determine the resultant of a system of forces and draw free body diagrams and can frame appropriate equilibrium equations from the free body diagram
- 2: Understand and solve the fundamental static problems and able to find centroid and centre of gravity
- 3: Determine area and mass moment of inertia for various sections.
- 4: Apply fundamental concepts of kinetics and kinematics of particles to the analysis of simple practical problems.
- 5: Understand and solve fundamental work, power and energy related problems and know the concepts of mechanical vibrations.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70H02	English Language Lab (Common for CE,EEE,ME,ECE,CSE, IT and Mi.E)	L	T	P
Credits: 2		-	-	4

The Language Lab focuses on the production and practice of sounds of language and familiarizes the students with the use of English in everyday situations and contexts.

Course Objective:

To sensitize the students to the intelligibility in their pronunciation of English, speech sounds, word accent, intonation and rhythm. It also helps to improve the fluency in spoken English and make them aware of nuances of major skills, viz listening and speaking skills. Hence it helps to train the students to understand nuances of both verbal and non verbal communication during all activities. The purpose of this course is to develop confidence levels of the students and to face the audience and participate in public speaking.

Listening Skills:

Objectives:

1. To enable students to develop their listening skill so that they may appreciate its role in the LSRW skills approach to language and improve their pronunciation
2. To equip students with necessary training in listening so that they can comprehend the speech of people of different backgrounds and regions

Students should be given practice in listening to the sounds of the language to be able to recognize them, awareness regarding stress and recognize and use the right intonation in sentences.

- Listening for general content
- Listening to fill up information
- Intensive listening
- Listening for specific information

Speaking Skills:

Objectives:

1. To make students aware of the role of speaking in English and its contribution to their success.
 2. To enable students to express themselves fluently and appropriately in social and professional contexts.
- Oral practice
 - Describing objects/situations/people
 - Just A Minute(JAM) Sessions.

Syllabus: English Language Communication Skills Lab shall have two parts:

a. Computer Assisted Language Learning (CALL) Lab

b. Interactive Communication Skills (ICS) Lab

The following course content is prescribed for the English Language Communication Skills Lab

Module - I:

CALL Lab: Introduction to Phonetics – Speech Sounds – Vowels and Consonants

ICS Lab: Ice-Breaking activity and JAM session

Listening: listening for sounds in context, for ideas.

Speaking: ideation and translation of ideas into sentences.

Module - II:

CALL Lab: Structure of Syllables - Past Tense Marker and Plural Marker – Weak Forms and Strong Forms -Consonant Clusters.

ICS Lab: Situational Dialogues – Role-Play- Expressions in Various Situations – Self-introduction and Introducing others – Greetings – Apologies – Requests – Social and Professional Etiquette - Telephone Etiquette.

Listening: listening for specific purposes, for details.

Speaking: speaking in the above situations with clarity, connectivity, maintaining voice characters.

Module - III:

CALL Lab: Word accent and Listening Comprehension-reading(aloud) meaningfully.

ICS Lab: Descriptions- Narrations- Giving Directions and guidelines.

Listening: listening for intelligible English

Speaking: formal and informal conversations, register.

Module- IV:

CALL Lab: Intonation and Common errors in Pronunciation- reading aloud(evaluating through recording).

ICS Lab: Extempore- Public Speaking, Oral Presentation Skills

Listening: note taking and listening for speaker's tone/attitude

Speaking: organizing, connecting ideas and sentences, short forms in spoken English, errors in spoken English

Module - V:

CALL Lab: Neutralization of Mother Tongue Influence and Conversation Practice

ICS Lab: Information Transfer, Debate

Minimum Requirement of infra structural facilities for EL Lab:

1. Computer Assisted Language Learning (CALL) Lab:

The Computer aided Language Lab for 40 students with 40 systems, one master console, LAN facility and English language software for self- study by learners.

System Requirement (Hardware component):

Computer network with Lan with minimum 60 multimedia systems with the following specifications:

a) P – IV Processor b) Speed – 2.8 GHZ, c) RAM – 512 MB Minimum
d) Hard Disk – 80 GB, e) Headphones of High quality

2. Interactive Communication Skills (ICS) Lab :The Interactive Communication Skills Lab: A Spacious room with movable chairs and audio-visual aids with a Public Address System, a T. V., a digital stereo –audio & video system and camcorder etc.

Books Suggested for English Language Lab Library (to be located within the lab in addition to the CDs of the text book which are loaded on the systems):

Prescribed Lab Manual: Rani Sudha, “*English Language Communication Skills laboratory*”
Manual Published by **Pearson Publication**, 5 edition, New Delhi 2014

Course Outcomes:

After completion of the course, students will be able to:

1. Understand the nuances of language through audio- visual experience and group activities
2. Neutralize the accent for intelligibility
3. Realize the importance of listening skills and speaking skills and their application in real life situations.
4. Recognize significance of non-verbal communication and develop confidence to face audience and shed inhibitions.
5. Speak with clarity and confidence thereby enhance employability skills of the students.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70B07	Engineering Physics Lab (Common to CE, EEE, ME, ECE, CSE, IT and Mi.E.)	L	T	P
Credits: 2		-	-	4

Objective:

The main objective of this course is to provide the necessary exposure to the practical aspects, which is an essential component for learning science.

List of Experiments:(any ten experiments)

1. Magnetic field along the axis of current carrying circular coil- Stewart and Gee's experiment
2. LASER- Diffraction due to single slit.
3. Newton's Rings.
4. Michelson interferometer (Demonstration only).
5. Melde's Experiment – Longitudinal and Transverse modes.
6. Sonometer- Frequency of A.C supply.
7. The RLC series circuit – Determination of resonant frequency, bandwidth and quality factor.
8. Evaluation of Numerical aperture of the given fiber.
9. Energy band –gap of a material of a P-N junction diode.
10. Torsional Pendulum- Determination of Rigidity modulus of the given wire.
11. LED characteristics.
12. Solar cell characteristics.
13. LASER diode characteristics.

Outcomes:

On Completion of this course, students are able to:

1. Develop skills to impart practical knowledge in real time solution.
2. Understand principle, concept, working, application and comparison of results with theoretical calculations.
3. Design new instruments with practical knowledge.
4. Understand measurement technology, usage of new instruments and real time applications in engineering studies.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70304	ENGINEERING MECHANICS AND AUTOCAD LAB (Common to CE, EEE,ME,ECE,CSE,IT and Mi.E)	L	T	P
Credits: 2		-	-	4

Course Objectives:

The objective of this subject is to provide the basic concept of force, moment of inertia, reaction and moments by practically and development of part drawings for various components drafting software.

Any **six** experiments from Module – A

Module- A: Engineering Mechanics Lab

1. Verification of triangle law and polygon law of forces.
2. Equilibrium of coplanar concurrent force system-forces in the jib crane.
3. To determine the support reaction for a beam.
4. To determine the moment of inertia of a flywheel.
5. Verifying the law of moments by disc apparatus.
6. To determine the coefficient of friction.
7. To study equilibrium of Non Concurrent forces.
8. To verify the equilibrium of forces using force table.

Module- B: AutoCAD Lab

Drafting: Development of part drawings for various components in the form of orthographic and isometric using AutoCAD software. Representation of dimensioning and tolerances scanning and plotting (2D Drawing).

COURSE OUTCOMES

At the end of the course, students should be able to

- 1:** Use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- 2:** Apply basic knowledge of math's and physics to solve real-world problems.
- 3:** Execute the basic commands using AutoCAD package
- 4:** Use basic drawing, editing and viewing tools.
- 5:** Prepare a layout.

2017-18 Onwards (MR-17)	MALLA REDDY ENGINEERING COLLEGE (Autonomous)	B.Tech. II Semester		
Code: 70M01	Computational Mathematics Lab (Common for CE,EEE,ME,ECE,CSE,IT and Mi.E)	L	T	P
Credits: -		-	-	3

Following Programming is to be done in C Language:

Course Objectives:

The objective of this course is to introduce various numerical techniques which are indispensable tools to solve many algebraic and transcendental equations. Various methods are used to reduce the global error involved in approximation root values in C Language.

MODULE – I:

1. Find the roots of Non-linear equation using Bisection method.
2. Find the roots of Non-linear equation using Regula - falsi method.
3. Find the roots of Non-linear equation using Newton-Raphson method.
4. Find the roots of Non-linear equation using Iteration method.

MODULE – II:

5. Find the smallest root of non-linear equation using Ramanujan's method
6. Solve the system of non-homogeneous linear equations using Gauss-Jacobi method
7. Solve the system of non-homogeneous linear equations using Gauss-siedal method
8. Lagrange's interpolation for unevenly spaced points

MODULE – III:

9. Numerical solution of first order O.D.E. using Euler's method.
10. Numerical solution of first order O.D.E. using 4th order Runge-Kutta method.
11. Numerical Integration using Trapezoidal Rule
12. Numerical Integration using Simpson's Rule
